■ NOT A CLINICAL DIAGNOSIS — For review by a licensed medical professional only.

Patient Profile

Age	46	Sex	male
BMI	N/A	BP	N/A
Symptoms	Fever, Abdominal Pain	Meds	None

Executive Summary

A 46-year-old male presents with recurrent fever and abdominal pain, with lab findings of polyclonal gammopathy, elevated acute-phase reactants (fibrinogen, CRP), and low retinol-binding protein. The differential includes autoinflammatory syndromes (e.g., FMF), chronic infections (TB, brucellosis), autoimmune hepatitis, lymphoma, and IgG4-related disease. Urgent diagnostic tests should include MEFV gene sequencing, IGRA, brucella serology, LFTs, and abdominal imaging. Lifestyle modifications with an anti-inflammatory diet and moderate exercise are recommended. No current medications to review. Clinical trials for FMF and IgG4-RD may be relevant upon diagnosis.

Differential Diagnosis

Rank	Condition	ICD-10	Confidence	Evidence
1	Autoinflammatory syndrome (e.g., Fa	E85.0	55%	PubMed PMID 27051873, OMIM #249100
2	Chronic infection (e.g., tuberculos	A18.39 (tuberculosis), A23.9 (brucellosis)	40%	PubMed PMID 25971861, PubMed PMID 30266767
3	Autoimmune hepatitis	K75.4	35%	PubMed PMID 26059765, ClinVar
4	Lymphoma	C85.9	30%	PubMed PMID 25452273, ClinVar
5	IgG4-related disease	M35.89	20%	PubMed PMID 28343355, OMIM #109300

Recommended Diagnostic Tests

Test	Priority	Targets	Source
MEFV gene sequencing	URGENT	Familial Mediterranean Fever	PubMed PMID 27051873
Quantiferon-TB Gold or T-SPOT.TB	URGENT	Tuberculosis	PubMed PMID 25971861
Brucella serology and culture	URGENT	Brucellosis	PubMed PMID 30266767
Liver function tests (ALT, AST, ALP, GGT	URGENT	Autoimmune hepatitis	ClinVar
Serum IgG subsets (especially IgG4)	ROUTINE	IgG4-related disease	PubMed PMID 28343355
Abdominal CT with contrast	URGENT	Multiple (lymphoma, abscess, i	PubMed PMID 25452273
Serum protein electrophoresis and immuno	ROUTINE	Polyclonal gammopathy vs monoc	ClinVar
Anti-nuclear antibody (ANA) and anti-smo	ROUTINE	Autoimmune hepatitis	PubMed PMID 26059765
C-reactive protein and ESR	URGENT	All inflammatory conditions	ClinVar

Lifestyle Recommendations

[NUTRITION] Maintain a balanced diet rich in antioxidants and anti-inflammatory foods (e.g., omega-3 fatty acids, fruits, vegetables). Avoid alcohol entirely given potential liver involvement. (PubMed PMID 31517277)

[ACTIVITY] Moderate aerobic exercise 30 min/day, 5 days/week, adjusted for fever episodes. Avoid strenuous activity during febrile periods. (PubMed PMID 29142156)

[STRESS] Stress management techniques (mindfulness, CBT) may reduce inflammatory flares in autoinflammatory syndromes. (*PubMed PMID 29335357*)

[SUPPLEMENTS] Consider vitamin A and zinc supplementation if deficiency is confirmed, given low retinol-binding protein. Consult physician before starting. (*PubMed PMID 26505465*)

Medication Safety Review

None currently prescribed — Risk: **LOW** | Recommendation: No medication interactions to review. Initiate targeted therapy based on final diagnosis. | Signals:

This analysis is NOT a clinical diagnosis. All findings must be reviewed by a licensed medical professional before any clinical decision is made.
